

RFC-PDF-017: In-memory PDF reader context

Use github.com/ledongthuc/pdf for text extraction in the PDF chunker.

The reader call is `pdf.NewReader(bytes.NewReader(file.Content), int64(len(file.Content)))`.

RFC-PDF-017 indexing boundary

The scanner binary guard allows .pdf before document indexing dispatch.

Encrypted and scanned documents remain out of scope for this positive eval corpus.
